

Create functional wishlist and myorder page

- User Story 1: Create a copy of challenge-10 and rename it as challenge-11.
- User Story 2: Create a wishlist.html page as per the mockup and use common header and footer
- User story 3: All wishlist icons and wishlist buttons should navigate to cart page

```
<li><a href="./wishlist.html">Cart</a></li>
```

- User Story 4: All product list should have a button to add the item to wishlist.
- User Story 5: clicking on the add to wishlist button should add the item to the wishlist.

```
<button onclick="addToWishlist()">Add to Cart</button>
```

```
function addToWishlist(product) {  
  // Use localStorage similar to addToCart for wishlist  
}
```

- User Story 6: The wishlist page should be similar to the the mockup provided(you need not to copy the exact mockup, you can use your creativity)
- User Story 7: Remove button should remove the item from the wishlist
- User Story 8: create myOrder.html similar to the mockup
- User Story 9: Should display the list of previous orders using localStorage
- User Story 10: User localStorage to save the wishlist and myOrder items. Page refresh should not loose the wishlist items.
